SUMMARY

Full-stack engineer with 3+ years building production web applications in C#/.NET, Angular, TypeScript, PHP and MySQL: engineered cross-application search, designed schemas and indexes, integrated Stripe and Zoho CRM.

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer, Sourcis

Jun 2023 – Aug 2026

Healthcare organization supporting clinic operations, patient care and digital marketing; 4-engineer team | Folsom, CA (Remote)

- Built and expanded a production healthcare management platform in C#/.NET, Angular, TypeScript and MySQL used by approximately 20 internal staff and 4 doctors, working closely with product and marketing to design and ship patient-facing forms, prescription and scheduling functionality.
- Designed and built a cross-application full-text search system over patient and operational records (MySQL FULLTEXT indexes), combining query prioritization, fallback matching and result deduplication; p95 under 500 ms in performance tests.
- Designed and optimized schemas, SQL queries and indexes for performance-critical search and reporting.
- Built a PHP/MySQL analytics platform for marketing and user data that contributed to a nearly 20% increase in conversion rates.
- Troubleshoot production issues across the stack and third-party integrations; wrote automated tests and used Docker to catch regressions earlier and deploy more reliably.
- Developed REST APIs and integrations with services including Stripe and Zoho CRM; co-developed Stripe webhook handling and connected internal workflows with external systems and data.

Junior Software Developer in Test, Broadcom Software

Sep 2021 – Apr 2022

Vancouver, BC

- Built Python and Selenium test suites (unit, integration, end-to-end, regression and performance) for AppNeta Performance Manager and its REST APIs.
- Investigated defects across application layers, reproduced issues and verified fixes.
- Used TeamCity to create software and test builds supporting automated regression testing and manual QA workflows.

PROJECTS

Reddit Sign-In Popup Blocker | JavaScript, Manifest V3, Vitest, jsdom, GitHub Actions

Aug 2026

- Shipped a Manifest V3 extension to the Chrome Web Store (82 users) and Firefox Add-ons (35 average daily users) as of Sep 2026; no extension API permissions, network calls or data collection.
- Batched MutationObserver-triggered DOM cleanup into one pass per animation frame; narrow selectors leave unrelated modals intact; CI runs 6 jsdom tests, validates manifests and builds release ZIPs.

Gerrymander.io (redistricting map editor) | React, TypeScript, Vite, MapLibre GL

May 2026

- Built a prototype browser editor for painting 2,658 North Carolina voting precincts (25.6 MB GeoJSON) into 14 districts, with brush hit-testing, stroke-level undo, district locking and JSON save/load.
- Styled districts via MapLibre feature-state so edits never re-upload GeoJSON; throttled painting and stats updates to one per animation frame; updated district totals in O(1) per reassigned precinct.

SKILLS

Languages: C#, TypeScript/JavaScript, SQL, Python, PHP

Frameworks & Testing: .NET (ASP.NET Core), Angular, React, Node.js, Selenium, Vitest

Data & APIs: MySQL (relational schema design, query and index optimization), REST API design, Swagger

Cloud & DevOps: AWS, Azure (App Service, MySQL Flexible Server, Blob Storage, Communication Services), Docker, Git, CI/CD (GitHub Actions, TeamCity)

AI-assisted development: ChatGPT and Codex for implementation, debugging and refactoring; output verified through code review, automated tests and manual testing.

EDUCATION

Bachelor of Science, Computer Science

2018 – 2023

University of British Columbia, Vancouver, BC
